DETAILED ACTION

In response to the communication filed on June 30, 2003, claim 1 is active in this application.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Oath/Declaration

Oath/Declaration filed on June 30, 2003 has been considered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Allen S. Melser on March 16, 2004.

The application has been amended as follows:

Re claim 1, page 10, line 18, change "regions" to -- region --.

Re claim 1, page 10, line 19, insert -- oxide film -- after "the second gate".

Re claim 1, page 10, line 22, change "regions" to -- region --.

In the specification, page 6, line 5, change "23" to -- 53 --.

In the specification, page 7, line 12, change the phrase "plate electrode 1" to -- storage electrode 61 --.

In the specification, page 7, line 20, change "31" to -- 65 --.

In the specification, page 8, line 10, change "61" to -- 65 --.

Reasons For Allowance

Claim 1 is allowable over the prior art of record.

3. The following is an examiner's statement of reasons for allowance: the prior art of record neither teach nor make obvious the claimed limitation of the instant application as a whole as recited in claim 1. In particular, the prior art does not teach or suggest the particular subset of the process steps for forming DRAM cell by etching a portion of the first interlayer insulating film on the drain region, the drain region, and a portion of the substrate below the drain region to expose the buried layer, whereby forming a contact hole for storage electrode; forming a vertical MOS transistor in the contact hole by forming a second gate oxide film pattern whose both ends are respectively overlapped on the drain region and a second gate electrode overlapped on the second gate oxide film; forming a storage electrode on the second gate electrode so that the both ends are respectively extending on the drain region and forming a dielectric layer and a plate electrode on the storage electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hsu, U.S./4,876,215 discloses similar process for forming the device.
